\* If plasticity index is equal to or less than (Liquid Limit - 30), the soil is A-7-5 (i.e. PL > 30%).  
If plasticity index is greater than (Liquid Limit - 30), the soil is A-7-6 (i.e. PL < 30%).

Besides Soil Classification on other criteria, the AASHTO Soil Classification System classifies soils into seven primary groups, named A-1 through A-7, based on their relative expected quality for road embankments, sub-grades, sub-bases, and bases. Some of the groups are in turn divided into subgroups, such as A-1-a and A-1-b. Furthermore, a Group Index may be calculated to quantify a soil's expected performance within a group. To determine a soil's classification in the AASHTO system, one first determines the relative proportions of gravel, coarse sand, fine sand, and silt-clay.

**Engineering, 2e** P. Purushothama Raj, 2013. Soil Mechanics and Foundation Engineering 2e. Presents the principles of soil mechanics and foundation engineering in a simplified yet logical manner that assumes no prior knowledge of the subject. It includes all the relevant content required for a sound background in the subject, reinforcing theoretical aspects with comprehensive practical applications. **Soil Mechanics Fundamentals** Isao Ishibashi, Hemanta Hazarika, 2010-12-14

While many introductory texts on soil mechanics are available, most are either lacking in their explanations of soil behavior or provide far too much information without cogent organization. More significantly, few of those texts go beyond memorization of equations and numbers to provide a practical understanding of why and how soil mechanics work. Based on the author's more than 25 years of teaching soil mechanics to engineering students, *Soil Mechanics Fundamentals* presents a comprehensive introduction to soil mechanics with emphasis on the engineering significance of what soil is, how it behaves, and why it behaves that way. Concise yet thorough, the text is organized incrementally, with earlier sections serving as the foundation for more advanced topics. Explaining the varied behavior of soils through mathematics, physics, and chemistry, the text covers: Engineering behavior of clays; Unified and AASHTO soil classification systems; Compaction techniques; water flow and effective stress; Stress increments in soil mass and settlement problems; Mohr's Circle application to soil mechanics and shear strength; Lateral earth pressure and bearing capacity theories. Each chapter is accompanied by example and practicing problems that encourage readers to apply learned concepts to applications with a full understanding of soil behavior fundamentals. With this text, engineering professionals as well as students can confidently determine logical and innovative solutions to challenging situations. **Geotechnical Engineer's Portable Handbook** Robert Day, 1999-12-02. Das, 1983 Soil Mechanics Through Project-Based Learning Ivan Gratchev, Dong-Sheng Jeng, Erwin Oh, 2018-11-21 The currently available soil mechanics textbooks explain theory and show some practical applications through solving abstract geotechnical problems Unfortunately they do not engage students in the learning process as students do not experience what they study This book employs a more engaging project based approach to learning which partially simulates what practitioners do in real life It focuses on practical aspects of soil mechanics and makes the subject come alive through introducing real world geotechnical problems that the reader will be required to solve This book appeals to the new generations of students who would like to have a better idea of what to expect in their employment future This book covers all significant topics in soil mechanics and slope stability analysis Each section is followed by several review questions that will reinforce the reader s knowledge and make the learning process more engaging A few typical problems are also discussed at the end of chapters to help the reader develop problem solving skills Once the reader has sufficient knowledge

of soil properties and mechanics they will be offered to undertake a project based assignment to scaffold their learning The assignment consists of real field and laboratory data including boreholes and test results so that the reader can experience what geotechnical engineering practice is like identify with it personally and integrate it into their own knowledge base In addition some problems include open ended questions which will encourage the reader to exercise their judgement and develop practical skills To foster the learning process solutions to all questions are provided to ensure timely feedback
